

SLEEVE WRAPPER Model SL360W (BM360-W)

Fully automatic machine designed to pack into sleeves the Tetra Wedge Package or similar packs with integrated straw, for many types of sleeve wrapped rigid containers glued on the bottom.

**Products infeed : TetraWedge container volume 125-
Configuration : unit of 1x3 ,1x4**

Capacity : 6000 packages/h

A practical sleeve package, using an efficient hot melt gluing and closing system, resulting in a particularly solid and elegant design. Providing easy and functional use for the consumer from supermarket shelf to home.

FULLY AUTOMATIC SLEEVE WRAPPER Model SL 360-W(BM360-W)

Characteristics:

- - ergonomic design which offers the maximum visibility of the working process and easy operator access
- - easy and fast format changeover
- - easy use and maintenance
- - mainly built in stainless steel and designed for easy cleaning operations

The cartons entering the machine on the feeding conveyor are inserted into the wrapping station by an inserting device in pre-grouped units of 8 or 9 packs.

The carton blank taken from the blank magazine and duly positioned, is wrapped around the packs during the transfer phase. After the passage through the gluing and closing station, the sleeve is moved into an upright position and discharged onto the outfeed conveyor.

Customised options can be designed on request.

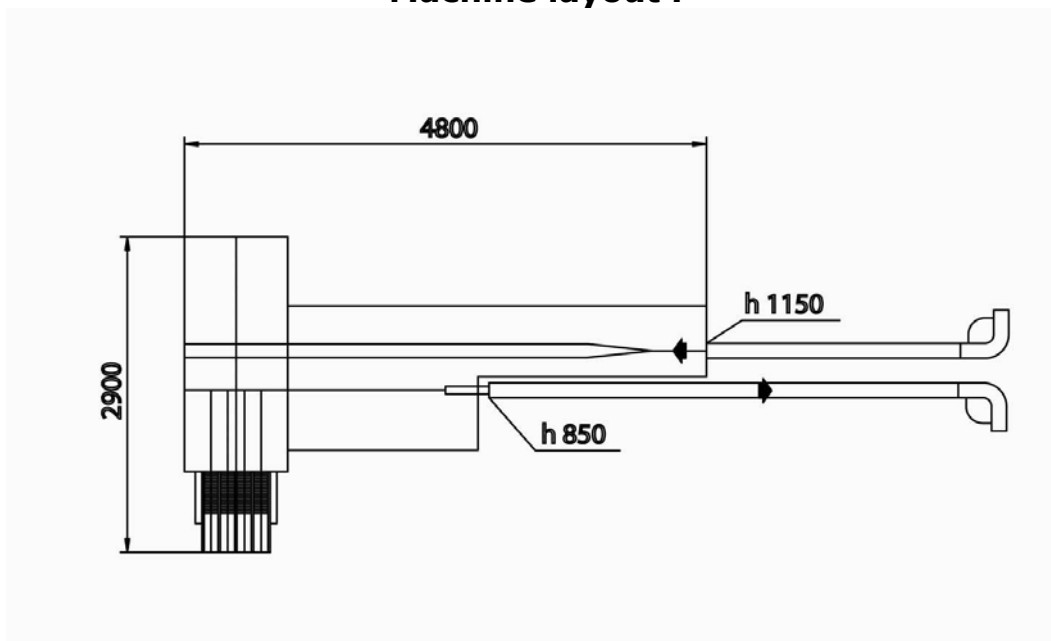

Carton blank magazine with high capacity
